

How to use the Hook Plate Tension Band

- Reduce the fracture and place the plate using the standard methods.
- Insert a non-locking screw in the top of one of the slots.
- String the fiber-wire or tension bandings wire through the suture holes.
- Wrap the wire around the screw in the **clockwise** direction.
- Tighten the screw, winding the wire, pulling the plate up, reducing the fracture.
- Install any additional desired screws into the plate to hold the fixation.
